PYTHON Assignment

By:

Jagadeeswaran . N

Build a python code, Assume u get temperature and humidity values (generated with random function to a variable) and write a condition to continuously detect alarm in case of high temperature.

Progam:

```
import random

def get_temperature(city_name: str) -> int:
    """Gets a random temperature from a possible range for a city."""
    temperature = ""
```

```
    print('Temp={0:0.1f}*C
Humidity={1:0.1f}%'.format
(temperature, humidity))
aio.send(temperature.key, temperature)
aio.send(humidity.key, humidity)
```

Output:

Temp=25.5*C Humidity=59.1%

Temp=25.5*C Humidity=59.1%

Temp=25.5*C Humidity=59.1%

Temp=25.4*C Humidity=59.0%
